

Software Engineer

Albuquerque, NM

October 9, 2017

Note: We are only considering candidates who are local to Albuquerque or who are already in process of moving here for other reasons.

Aviata

Aviata is a fast-moving, product development-oriented organization actively building and supporting solutions that connect major brands to millions of their customers. As a core member of the team, help us build cutting edge systems which will enable us and our clients to make data-driven decisions and present customers the right content at the right time.

Software Engineer

Our software engineers are responsible for maintaining existing systems and building next generation products at Aviata. Work primarily falls into one of several categories:

1. Developing SasS web apps. React / Node.js
2. Backend work. Traditionally has evolved around high-data throughput, real-time systems. Scala, Node.js, Java/Spring
3. Other misc work. We've done: Android apps, DevOps work, and working with Machine Learning (Python w/ Tensorflow).

This is a very unique opportunity for Albuquerque, as we use cutting edge technology. We are willing to work with and train developers new to these tools and frameworks.

As this posting is for various skill levels, there is some flexibility on the requested skillset depending on experience. Senior level developers are expected to hit the ground running and contribute by both mentoring the team and driving new ideas and approaches.

We run an Agile Scrum team with one-week sprints on the R&D side. Automated testing and CI/CD are a core part of our software delivery strategy.

Job Responsibilities

Primary: Research and Development of new products or development work related to other high level company objectives

Secondary: Maintain existing systems

Development Stack

R&D: Nginx, Node.js, Scala, Java/Spring, React, Cassandra, Redis

Existing systems: LAMP, Python, Angular

Tools: Docker, LXD, Git, JIRA, Confluence

Desired

- JavaScript /or Java
- Async programming
- Demonstrated passion for technology / software development outside of work

Bonus

- Scala
- Node.js
- LXD or Docker
- DevOps experience
- NOSQL
- Akka, Angular, Play!, React, Spark
- Spring

Job responsibilities

- You will spend the vast majority of your time doing development work
- Everyone on the team learns the full stack. You will spend time working on the UI, business, and persistence layers.
- Participate in design and architecture discussions
- Research solutions and suggest new services or technology to use to solve various problems
- There is occasional DevOps work
- Participate in 24x7 on-call rotation for production system monitoring and resolution of critical problems. Note: that we've automated much of this to simplify your life.
- Handle the occasional customer technical support request

Job Type: Full-time
