

Kontra Technologies Inc. Job Posting

Kontra Technologies was founded under the belief that everyone should have access to security. Kontra is actively developing hardware and software solutions to reduce cost, expand accessibility, and greatly increase service in the security industry.

KC2 (Kontra Command Center) is a business application that forms the backbone of the solution we provide to our customers, and we are currently in need of several additional Android developers to implement Kontra's vision, and our customer's wants and needs.

Android Developer

Responsibilities:

- Take ideas from inception through prototype, development, and production cycles
- Write clean, testable, documented code for Android devices
- Work closely with customers to get feedback, and implement their needs and wants into your code
- As a startup, your role may vary from day to day, including meeting with clients, providing customer support, in addition to your role as a software developer

Basic Qualifications:

- Working knowledge of Android and the common architectures used for modern development (MVC, MVP, MVVM)
- High level of proficiency with the Java language
- Experience implementing 3rd party SDKs and APIs
- Ability to start full time in January, 2018

Preferred Skills and Experience:

- Developed a working, demonstrable Android application
- Familiarity with common cloud providers, such as AWS, Azure, or Firebase, and their SDKs
- Familiarity with the Google Maps API, or other map APIs
- Enthusiasm for experimentation, especially with front-end design

Additional Requirements:

- Must be able to work extended hours and weekends as needed

Job Location

- Albuquerque, NM, United States
