IT Intern – Web/software development

Job Description

This is a part-time web and software development intern position. The successful candidate will work closely with Center management and IT Specialists developing systems to support business activity and decision-making.

Responsibilities:

The candidate:

- Works with subject matter experts and internal customers to identify, collect and develop applications and content in support of business functions and clinical trial operations
- Works closely with the Associate Center Director - Technical Operations, the Chief of IT, and the Lead Software Developer to document, design, develop, test, implement, and maintain business and clinical trial operations support systems
- Supports the software development team with other projects as assigned

The ideal candidate will have web and software development experience using ColdFusion, .NET and/or SharePoint although experience with other development environments/platforms is acceptable. Knowledge and experience of software design and development principles, and software testing methodology is required. The candidate must possess a strong aptitude to learn modern technologies and skills, excellent communication and analytical skills. Proven problem-solving skills and creative thinking are highly desirable.

The successful candidate will work closely with the software design team to:

- Document system requirements
- Design and develop applications/reports (both Windows and web-based)
- Test software
- Assist in writing system support and technical documents
- Troubleshoot and diagnose reported software issues

Technical Competencies and Skills:

- Experience developing using ColdFusion, .NET and/or SharePoint
- MS SQL experience is desirable
- Self-motivated and accepts responsibility while collaborating with team members
- Strong analytical skills
- Excellent written and oral communication skills
- Detailed oriented
- Ability to prioritize multiple tasks/projects and easily adapt to changing priorities and requirements
- Ability to think and work independently with limited direct supervision
- Possess creativity to bring new ideas to the design and development of programs
